Streamline Delivery Orders with Caller ID

Perfect for pizzerias or other restaurants that offer delivery, Harbortouch offers a fully integrated caller ID module.

This accessory will allow you to view incoming calls directly on your POS screen. If the call coming in is recognized as an existing customer, the system will automatically display their information and then enable you to quickly create a new order for this customer. If the number calling is not recognized, the system will bring up the "create new customer screen" to enter your customer's information and then allow you to easily enter the order for that customer. Your customer's information will then be saved for future orders.

If you have multiple Harbortouch stations at your business, you can decide which Harbortouch station is set up to receive the calls so that your other stations are not affected.

Three options are available: 2-line, 4-line and 8-line, depending on the expected inbound call volume.

Contact your sales representative to add a caller ID module to your Harbortouch system today!
